Jennilyn Teng
UI Designer

SUMMARY

Creative and user-centered UI/UX Designer with 10+ years of experience crafting data-driven visual products for federal and private sector clients. Adept at leading projects from concept to launch, creating intuitive interfaces, and collaborating with cross-functional teams. Passionate about designing accessible, impactful digital experiences.

WORK EXPERIENCE

Senior Interactive Designer
United States Government (January 2022 to present)

- Work within the analysis department alongside analysts to design and develop templated and custom interactive visual products to tell analytic stories.
- Create storyboards to communicate product vision and visual story flow to analysts and additional stakeholders. Perform quick idea generation to brainstorm the most effective medium to convey a particular analytic story.
- Lead creation and maintenance of website projects for various internal offices, as well as design and assist in the front-end development of these websites. Design and implement new features and functionalities for WordPress sites. Implement CSS preprocessors such as Sass to streamline the styling process and maintain a more organized codebase.
- Create low fidelity prototypes of interactive stories and website redesigns for desktop and tablet screens, improving user experience, visual design, user flow, and accessibility.

Senior UI Designer
Intellibridge, formerly U.Group (February 2021 to November 2021)

- Orchestrate project planning, brainstorm and working sessions with my project teams and clients.
- Work independently with minimal art direction or oversight from design directors to create compelling design concepts and deliverables — from quick and iterative wireframes to pixel-perfect, build-ready comps and prototypes, complete with interaction states.
- Present my ideas to clients and effectively communicate details to all levels of management.

Visual Designer
Fjord/Accenture Federal Services (August 2019 to February 2021)

- Identify user needs, develop human-centered design strategies, and create visual design artifacts to support a range of federal clients. Complete user research including interviews and workshops to identify opportunities and pain points with Service Design leads and Interaction Designers.
- Prepare prototypes and craft UX flows, working closely with clients during working sessions to present and gain feedback.
- Drive development and communication of design systems, style guidelines, and component libraries. Collaborate with developers in aligning visual designs with website functionalities.
- Deliverables range from current and future state artifacts, ecosystem maps, low- and high-fidelity wireframes, blueprints, and research readouts.

WORK EXPERIENCE (CONTINUED)

Designer
Morning Consult (May 2018 to August 2019)

- Design compelling creative materials for Morning Consult's wide range of clients (from Fortune 100 companies to trade organizations and interest groups).
- Efficiently work with internal departments, such as client services managers, data science team, web developers, and marketing/communication teams to translate data and content into beautiful, exciting visual experiences for our clients.
- Deliverables range from static data visualizations and infographics, interactive web platforms, video, and company swag.

Designer
Gartner (August 2015 to May 2018)

- Design layouts for high-quality presentations and publications, including research studies, meeting handouts, on-screen presentations, infographics, and marketing materials.
- Communicate with internal global clients to understand their needs and collaborate with them to make appealing corporate designs.
- Manage each project's entire design development, from concept creation to managing resources and allocating time across project priorities.
- Develop and maintain strong client relationships.
